**WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY**

International application No.

PCT/US04/41694

Box No. I Basis of this opinion

1. With regard to the language, this opinion has been established on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.

☐ This opinion has been established on the basis of a translation from the original language into the following language _____, which is the language of a translation furnished for the purposes of international search (under Rules 12.3 and 23.1(b)).

2. With regard to any nucleotide and/or amino acid sequence disclosed in the international application and necessary to the claimed invention, this opinion has been established on the basis of:

a. type of material

☐ a sequence listing

☐ table(s) related to the sequence listing

b. format of material

☐ in written format

☐ in computer readable form

c. time of filing/furnishing

☐ contained in international application as filed.

☐ filed together with the international application in computer readable form.

☐ furnished subsequently to this Authority for the purposes of search.

3. ☐ In addition, in the case that more than one version or copy of a sequence listing and/or table relating thereto has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

4. Additional comments:

**WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY**

International application No.
PCT/US04/41694

Box No. V Reasoned statement under Rule 43 bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims <u>2,3 and 8-19</u>	YES
	Claims <u>1 and 4-7</u>	NO
Inventive step (IS)	Claims <u>9-19</u>	YES
	Claims <u>1-8</u>	NO
Industrial applicability (IA)	Claims <u>1-19</u>	YES
	Claims <u>NONE</u>	NO

2. Citations and explanations:

Claims 1 and 4 lack novelty under PCT Article 33(2) as being anticipated by Guirao et al. Guirao discloses the computerized optimization of a refractive prescription based on measured wavefront aberration data that has been analyzed mathematically, such as by Zernike polynomial analysis. Retinal image quality metrics are used to determine the optimal prescription.

Claims 1 and 4-7 lack novelty under PCT Article 33(2) as being anticipated by Pettit et al. Pettit discloses determining a treatment prescription via wavefront analysis and further discloses optimizing said prescription based on a classification element in common with the current patient (paragraphs 12-14).

Claims 2, 3 and 8 lack an inventive step under PCT Article 33(3) as being obvious over Guirao in view of Campin. Campin discloses a method for determining a corrective prescription wherein the wavefront aberrations are determined for the entire range of accommodation and the corrective prescription is optimized at a particular focal length based on the desired optimal focus distance. One of ordinary skill in the art would recognize that the desired optimal focus distance can be based upon the patient's known defocus predisposition (myopia/hyperopia) and/or the environmental situation to which the patient is most commonly subjected (i.e., tasks performed most often).

Claims 9-19 meet the criteria set out in PCT Article 33(2)-(3), because though the prior art discloses actually obtaining wavefront data through focus, as in Campin, it does not teach or fairly suggest simulation of said through focus data.

Claim 1-19 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.
